## **DETAILED ACTION**

### ***Drawings***

The drawings are objected to as failing to comply with 37 CFR 1.84(p)(5) because they do not include the following reference sign(s) mentioned in the description: 16, the 'trunk opening wall'. Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

### ***Claim Objections***

Claim 1 is objected to because of the following informalities: the phrase "attachment to a walls of the trunk space" is grammatically puzzling. Appropriate correction is required.

***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1, 2,3, 5, 6, 7, 8, 9, and 10 are rejected under 35 U.S.C. 102(b) as being anticipated by Porkola (US 2,778,554). Porkola discloses an apparatus for containing articles in a car having a rigid supporting frame (column 2, line 34), a flexible pouch (column 2, line 43), and hinges for attaching the frame supporting the pouch to the car (Fig. 1, ref. #'s 27 and 28). As in claim 5, the Porkola invention's pouch is flexibly attached to the rigid frame (column 2 line 45). With regard to claims 6 and 7, the frame is rotated about the hinges at 27 and 28 so that the bag can be stowed and deployed for use. With regard to claims 8 and 9, the storage system disclosed in Porkola includes a rotatable frame hinged inside a vehicle that can be stowed and deployed. With regard to claim 10, Figure 1 shows the deployed device as substantially perpendicular to the vehicle interior wall and in column 2, line 42, the stowed position is disclosed as substantially parallel to the vehicle wall.

Claims 1, 3, 4, and 5 are rejected under 35 U.S.C. 102(b) as being anticipated by Moore (US 5,340,004). Moore discloses a flexible netting 10 attached to a vehicle and rotatably hinged around element 26, supported by a longitudinally elastic frame 34 or

34'. The elasticity of the frame allows it to expand to increase storage space. In regard to claim 5, the flexible netting 10 is flexibly attached to the frame 34 or 34' (column 2 line 23).
